

## Job Title: Backend Product Engineer

We are looking for a backend engineer passionate about building AI-enabled products.

### Responsibilities:

- Design, build, and maintain backend services and APIs.
- Integrate AI/LLM models into production workflows.
- Work with databases, caching, and cloud infrastructure.

### Requirements:

- Strong experience with Python or Java backend frameworks (FastAPI, Spring Boot, etc.)
- Understanding of RESTful API design.
- Knowledge of databases (MySQL, PostgreSQL, MongoDB).
- Experience or exposure to AI/LLM or prompt engineering is a plus.
- Good communication and willingness to learn.

### Evaluation Focus:

- Technical backend competency
- System design and scalability awareness
- AI integration understanding
- Cultural fit and collaboration
